

Thank You for a Wonderful 2023, looking forward to 2024

How G Medical Innovations is transforming telehealth and mobile cardiac telemetry

Welcome to the G Medical Innovations **newsletter**, where we share with you our latest news, insights, and stories from the telehealth and mobile cardiac telemetry industry. In this year-end edition, we will highlight some of our achievements and milestones in 2023 and how we are making a difference in the lives of millions of people who suffer from cardiac diseases and conditions.

Our new product, A revolutionary chronic care management system that empowers patients to take control of their health

We are thrilled to introduce our new flagship product, the **Prizma**, an **ecosystem** that empowers patients to take control of their health and enables physicians to monitor their patients and improve outcomes. Prizma consists of the following components:

- A suite of sensors, such as 1-lead ECG, SPO2, temperature, BP, and weight scale, that can be used by the patients at home and transmit their vital signs and other measurements to the cloud in real-time.
- Portals and Smartphone Apps for the patients and physicians, where they can view trends and history, perform video conferences, write prescriptions and meeting summaries, and receive alerts for any abnormality or symptom detected.
- A secured HIPAA compliance cloud-based platform where the data from the sensors are stored, analyzed, and shared securely.

Prizma has many benefits for both patients and providers. For patients, it can improve their quality of life, reduce hospital visits, and lower their healthcare costs. For providers, it can enhance their efficiency, accuracy, and productivity. It can also empower patients to take control of their medical conditions.

Prizma ecosystem allows physicians to offer their patients RPM and RPT services, which are covered by CPT codes and, on the one hand, improve patients' treatment and, on the other hand, allow the clinic to generate additional revenue streamline.

We are proud of our innovation and believe that Prizma is a game changer in the healthcare industry and in the lives of our patients.

Our expanded telehealth network and partnerships

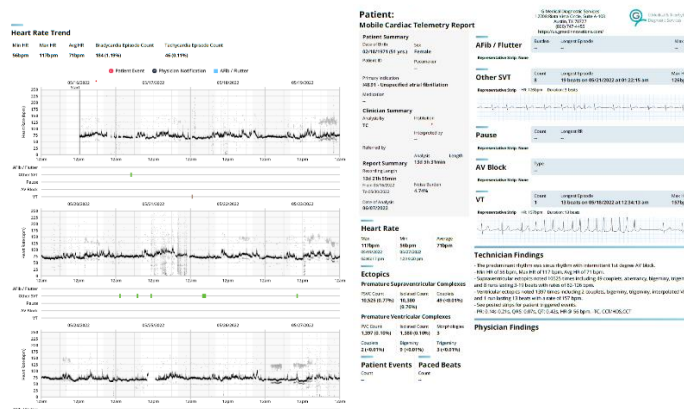

We are also excited to share with you that we have expanded our telehealth network and partnerships with leading healthcare providers and insurers across the country. We now offer our telehealth solutions and mobile cardiac telemetry services to more than 100 million members and patients, covering a wide range of cardiac conditions and needs.

Our telehealth solutions and mobile cardiac telemetry services are designed to provide convenient, accessible, and affordable care to our customers and patients. Our telehealth solutions and mobile cardiac telemetry services are proven to improve outcomes, reduce costs, and enhance quality of life.

Facts you may not be aware of

The Triple Analysis: You need to know about how our services enhance your patient's care in extra 2 unique steps.

Did you know that at the end of each MCT study, the entire report undergoes a double screening to detect events that the device's algorithm did not detect in real-time? At G Medical, this is our unique approach: An AI-based algorithm conducts the first screen and is then verified by certified cardiac technicians. On average, 16% more events are identified during the end-of-study screening. We are committed to you and your patients, and we triple-check each case. The outcome justifies our efforts.

Leading the 4th healthcare revolution with our investment in R&D, quality assurance, and regulations

We are committed to investing in research and development to bring you the most cutting-edge solutions for home hospitalization and remote treatment. These are the core values of the 4th healthcare revolution, which we are proud to be part of.

Our R&D team is constantly working on enhancing our flagship product, the Prizma ecosystem, as well as developing new sensors and monitoring solutions that are not available today. Prizma is a smart portable device that can monitor vital signs, detect abnormalities, and alert medical professionals in real-time. It can also sync with our cloud-based platform, where we can store, analyze, and share the data securely.

We are excited to share our R&D efforts with you, and we look forward to launching these new features soon. As our customer, you will be the first to use them and enjoy the benefits of being part of the 4th healthcare revolution.

Our culture and team spirit

Finally, we want to acknowledge and celebrate our culture and team spirit that makes us who we are. We have fostered a collaborative, diverse, and inclusive work environment that values and respects each and every one of our team members. We have welcomed new talent and expertise to our team and provided opportunities for learning and development for our existing staff.

Our team receives ongoing training and education from leading industry instructors, which keeps them up-to-date and enables them to provide you with our well-known high-service standards. In addition, our company culture reflects our commitment to delivering our well-known personal, attentive, and flexible service to our customers. We respect your preferences, adapt to your requirements, and ensure your satisfaction throughout the process.

To conclude:

We know that you have alternatives, and we are truly grateful and honored to have you as our valued customer and partner in this journey. We look forward to serving you and meeting your needs in the coming year and beyond.
